Professional Summary

Computer Science & Engineering undergraduate (B.Tech, Class of 2028, GPA 8.2) specialising in cybersecurity, network security, and full-stack web development. Completed industry simulations with Deloitte Australia and Tata covering log analysis, threat identification, and incident response. Certified in Machine Learning and Python; ships production applications with Node.js, Express.js, and Socket.io. Seeking internship or entry-level roles in cybersecurity or software engineering.

Professional Experience

Cybersecurity Virtual Intern

Cyber Job Simulation

Deloitte Australia (Forage)

October 2025

- Analysed multi-source log datasets to detect simulated threat indicators using structured SOC triage methodologies aligned with real-world analyst workflows.
- Classified threats via industry security frameworks, producing written findings that communicated risk clearly to both technical and non-technical audiences.
- Completed all forensic investigation modules, reinforcing pattern-recognition skills critical to incident detection and response at enterprise scale.

Cybersecurity Simulation Participant

Virtual Experience Program

Tata (Forage)

2025

- Executed threat analysis and vulnerability assessment exercises applying defence-in-depth principles to simulated enterprise network environments.
- Evaluated attack scenarios across identity & access management and network perimeter vectors, producing structured risk reports for each challenge module.
- Strengthened knowledge of network security fundamentals and OWASP-aligned web security practices applicable to entry-level cybersecurity analyst roles.

Projects

Anonymous Hacker Chat Terminal

Node.js, Express.js, Socket.io, HTML5, CSS3

[github](#) | [livedemo](#)

Built a fully anonymous real-time chat app over Socket.io WebSockets, supporting concurrent sessions with sub-100ms message delivery and zero persistent user-data storage.

Designed an ephemeral session architecture enforcing privacy-first principles and secure server-side event management across all client connections.

Deployed to Vercel with a cyberpunk terminal UI, delivering a complete full-stack solution from WebSocket backend to responsive, theme-consistent frontend.

Lofi Music Web Application

JavaScript, HTML5, CSS3, Web Audio API

[github](#) | [livedemo](#)

Developed a high-fidelity music platform with dynamic ambient-environment controls and real-time theme switching, optimising UX for productivity-focused use cases.

Engineered a modular frontend architecture for audio stream management, reducing UI state errors and ensuring consistent playback across user sessions.

Shipped to production on Vercel; part of a 25+ repository public GitHub portfolio demonstrating consistent end-to-end project delivery.

Education

B.Tech – Computer Science & Engineering

Parala Maharaja Engineering College, Berhampur, Odisha

Aug 2024 – Jul 2028

GPA: 8.2 / 10.0

Higher Secondary Certificate (Science) – Ramachandra Mardaraj Higher Secondary School, Odisha

Technical Skills

Languages:	JavaScript (ES6+), Python, C, C++, TypeScript, HTML5, CSS3
Backend:	Node.js, Express.js, Socket.io (WebSockets), REST API Design
Cybersecurity:	Log Analysis, Threat Identification, Network Security, OWASP, Vulnerability Assessment
Tools:	Git, GitHub, Linux (CLI), Vercel, VS Code
Certifications:	Deloitte Cyber Simulation Tata Cybersecurity Simulation Intro to ML Python for Web Data Managing ML P
